

# Secure 2007™

## Real Time Loss Prevention System

### Advanced & Effective Loss Prevention

Secure 2007 offers retailers a comprehensive Loss Prevention solution that transforms and advances how fraudulent Point of Sale (POS) activity is identified, tracked and stopped.

Secure 2007 has been developed in partnership with a major global retailer. Through working closely with active loss prevention personnel, the design and features of Secure 2007 have been strongly influenced by the requirements of the field.

Point of Sale information can be supplied to Secure 2007 in Real Time or Batch along with supporting reference information such as Employee Data and CCTV footage. Secure 2007 collates all this information to provide users with everything they need to quickly investigate incidents.

Detecting fraudulent activity can be a pain staking and highly technical activity. The automated detection features of Secure 2007 greatly simplifies the process and enables existing Loss Prevention personnel to get results without needing the assistance of specialised Data Analysts.

Secure 2007 allows centralised loss prevention management teams to seamlessly coordinate field officers in order to get the most from existing resources. Loss Prevention management and field investigation personnel interact with Secure 2007 through an easy to use web application designed to minimise the amount of training required by users in order to become effective with the system.

Detailed Management Reports enable Loss Prevention managers to understand the extent of their problem and how effective their current response is. Secure 2007 also automatically calculates the financial impact of each incident and provides a Return on Investment (ROI) calculation to help managers decide on the most financially beneficial cases to investigate.

### Key Features

- A Complete Loss Prevention System based on a cyclical Plan, Do and Review Process
- Rules based automated detection of anomalous Point of Sale transactions and events
- Presentation of prioritised work lists containing the most suspicious incidents based on Business Priority
- Configurable, Structured Investigation Plan for all Incident types
- Real Time Reporting with drill down, drill up capabilities
- Built in Case Management
- CCTV Integration
- Definable Roles for Store based, Regional based and Head Office based users

## A Complete Loss Prevention Process

### The Secure Approach

Secure 2007 implements a three stage approach that encompasses the complete loss prevention process.

Each stage offers specific functionality designed to meet the section goals.

#### 1. Plan

- Users have a choice of manual (Reports) and automated detection methods (Rules)
- Manual detection involves the use of Real Time Reports to identify and understand suspect areas
- This knowledge can then be translated into automated rules to ensure sustainability
- Data can be analysed within and across POS Transactions and Events

#### 2. Do

- Investigation activity is driven by prioritised work lists
- Investigators can focus on top ranked stores, payment cards and cashiers
- Information such as Till Receipt and CCTV footage can be accessed to aid investigation
- Clear and Concise next steps guide the investigator through the correct process
- Positive incidents can be assigned to cases for ongoing investigation. Feedback can be supplied on negative incidents

#### 3. Review

- Assess system performance using various Management Information reports
- Use investigators feedback to continually evolve the effectiveness of the system

## Key Capabilities

Secure 2007 is able to accurately detect a wide range of issues including :-

- Refunds and Returns
- Price Reductions
- Staff Discounts
- Collusion
- Voids
- Price Reductions
- Coupons
- Loyalty Cards
- Self Scan
- Procedural Conformance
- Faulty Equipment

## Key Benefits

- Suitable for Retail Businesses of all sizes
- High Return on Investment with major savings off the bottom line
- Use your Existing Resources more effectively
- Can analyse millions of transactions per day
- Fast Installation Time
- Flexible Licensing options including Purchase, Leasing and Off-Site hosting

## About Sysrepublic

Sysrepublic specialise in the provision of software products and consultancy services for the retail and hospitality sectors. Sysrepublic are industry pioneers in the use of Microsoft technologies for the implementation of Real Time Retailing and Loss Prevention.

Sysrepublic works with major retailers worldwide to deliver leading integration and data exploitation solutions.
